PROFESSIONAL SUMMARY

Backend Engineer with approximately 1 year of experience architecting and delivering scalable backend systems for ERP and SaaS platforms. Independently owned system design, REST API architecture, and relational data modeling using Java 17, Spring Boot, Hibernate, and MySQL — playing a central role in transitioning a services company to a product-based model. Focused on clean API contracts, performance tuning, and reliable delivery with minimal supervision. Currently deepening expertise in caching (Redis), cloud deployment (AWS), and CI/CD.

TECHNICAL SKILLS

Backend Architecture & APIs: Java 17, Spring Boot, Microservices, REST API Design, System Design, Performance Tuning
Data Layer: Hibernate / JPA, MySQL, SQL
Tools & Version Control: Git, GitHub, Postman, IntelliJ IDEA, STS
Frontend (Working Knowledge): HTML5, CSS3, JavaScript, React.js
Currently Learning: Redis, AWS, Docker (basics), GitHub Actions / CI-CD

EXPERIENCE

Java Developer — LNV Digital Systems *Sep 2025 – Present*
Ambarnath, Maharashtra

- Independently designed and developed backend systems for two ERP/SaaS products from the ground up using Java 17, Spring Boot, Hibernate, and MySQL.
- Drove the company's transition from a service-based to a product-based model by delivering reliable, scalable backend architecture with minimal supervision.
- Built and maintained RESTful APIs consumed by frontend teams, ensuring clean contracts and consistent response formats.
- Collaborated with senior developers on system design decisions, performance tuning, and code reviews.
- Implemented business logic and backend workflows for ERP modules including inventory, billing, and reporting, with an emphasis on reliability and maintainability.

UI/UX Designer — Studio Atelier (Contract) *Aug 2025*
Borivali, Maharashtra

- Contributed to user interface design projects, gaining cross-functional exposure to product design workflows.

PROJECTS

Anigaze – Anime Streaming Platform | *Java, Spring Boot, Hibernate, React.js, Video.js, ffmpeg, MySQL*

- Built a full-stack streaming platform with video upload, transcoding via ffmpeg, and adaptive playback using Video.js.
- Designed RESTful backend APIs with Spring Boot and Hibernate for user management, content catalog, and streaming sessions.

Bill-Hive – Billing & POS Progressive Web App | *HTML5, CSS3, JavaScript, React.js (v2), IndexedDB, Service Workers*

- Built a fully offline-capable POS and billing PWA with IndexedDB persistence, print customization, and image editing.
- Engineered a React Vite v2 frontend with error boundaries and modular settings, backed by a Spring Boot API (JWT auth, MySQL, 14-entity schema).

EDUCATION

Full Stack Java Development *May 2024 – Present*
Net Tech India, Thane

Bachelor of Management Studies (BMS) *Jul 2021 – May 2024*
BNN College, Kalyan, India

STRENGTHS & SOFT SKILLS

- Independently delivered two production-level backend products with minimal supervision, demonstrating ownership and reliability.
- Strong stakeholder communication — prior auditing experience with 120+ clients across diverse industries.
- Quick learner with a growth mindset — transitioned from a non-IT background to professional Java development within a year.
- Comfortable working under pressure and managing multiple workstreams simultaneously.
